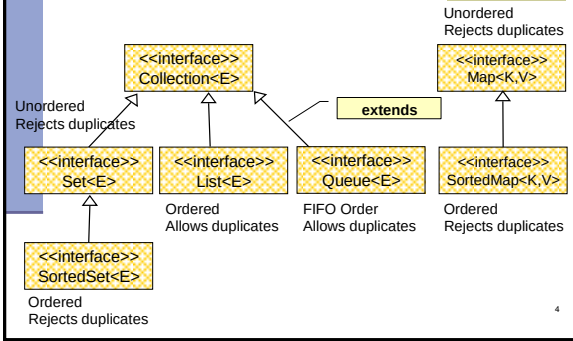
Collection Interfaces



Online Resources

- Java 6 API Specification:
  http://java.sun.com/javase/6/docs/api/
  - The Collections framework in java.util
- Sun Tutorial:
  http://java.sun.com/docs/books/tutorial/collections/

A Simple Example

```
Collection<String> stringCollection = ...
Collection<Integer> integerCollection = ...

stringCollectio
integerCollect
integerCollect

stringCollection.add(7);
integerCollection.add("world");
stringCollection = integerCollection;
```

- מצביעים ל Collection של מחרוזות ושל מספרים
- Collection אינו מחזיק טיפוסים פרימיטיביים, לכן נשתמש ב Integer, Double, Float וכדומה
- נראה בהמשך אילו מחלקות מממשות מנשק זה

A Simple Example

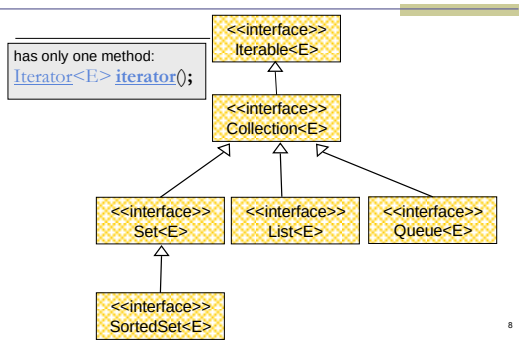
```
Collection<String> stringCollection = ...
Collection<Integer> integerCollection = ...

stringCollection.add("Hello");
integerCollection.add(5);
integerCollection.add(new Integer(6));

stringCollection.add(7);
integerCollection.add("world");
stringCollection = integerCollection;
```

Collection extends Iterable

has only one method:
Iterator<E> iterator();



8

A Simple Example

```
Collection<String> stringCollection = ...
Collection<Integer> integerCollection = ...

stringCollection.add("Hello");
integerCollection.add(5);
integerCollection.add(new Integer(6));

stringCollection.add(7);
integerCollection.add("world");
stringCollection = integerCollection;
```

7

Iterating over a Collection

- Explicitly using an Iterator

```
for (Iterator<String> iter = stringCollection.iterator();
     iter.hasNext(); ) {
    System.out.println(iter.next());
}
```

- Using foreach synatx

```
for (String str : stringCollection) {
    System.out.println(str);
}
```

10

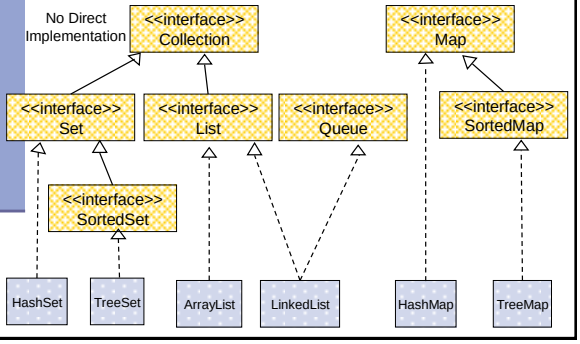
The Iterator Interface

- Provide a way to access the elements of a collection sequentially without exposing the underlying representation
- Methods:
  - **hasNext()** - Returns true if there are more elements
  - **next()** - Returns the next element
  - **remove()** - Removes the last element returned by the iterator (optional operation)

Command and Query

9

General Purpose Implementations



Collection Implementations

- Class Name Convention: <Data structure> <Interface>

General Purpose Implementations		Data Structures			
		Hash Table	Resizable Array	Balanced Tree	Linked List
Interfaces	Set	HashSet		TreeSet (SortedSet)	
	Queue		ArrayDeque		LinkedList
	List		ArrayList		LinkedList
	Map	HashMap		TreeMap (SortedMap)	

11

Set Example

```
Set<Integer> set = new HashSet<Integer>();
set.add(3);
set.add(1);
set.add(new Integer(1));
set.add(new Integer(6));
set.remove(6);
System.out.println(set);
```

A set does not allow duplicates. It **does not** contain:
- two references to the same object
- two references to null
- references to two objects a and b such that a.equals(b)

remove() can get only *reference* as argument

Output: `[1, 3] or [3, 1]`

Insertion order is not guaranteed

14

List Example

Interface

```
List<Integer> list = new ArrayList<Integer>();
list.add(3);
list.add(1);
list.add(new Integer(1));
list.remove(list.size()-1);
System.out.println(list);
```

Implementation

`List` holds `Integer` references (auto-boxing)

List allows duplicates

Invokes `List.toString()`

`remove()` can get *index* or *reference* as argument

Insertion order is kept

Output: `[3, 1, 1]`

13

Map Example

```
Map<String,String> map = new HashMap<String,String>();
map.put("Dan", "03-9516743");
map.put("Rita", "09-5076452");
map.put("Leo", "08-5530098");
map.put("Rita", "06-8201124");
System.out.println(map);
```

No duplicates

Unordered

Output:

{Leo=08-5530098, Dan=03-9516743, Rita=06-8201124}

Keys (names)	Values (phone numbers)
Dan	03-9516743
Rita	06-8201124
Leo	08-5530098

16

Queue Example

```
Queue<Integer> queue = new LinkedList<Integer>();
queue.add(3);
queue.add(1);
queue.add(new Integer(1));
queue.add(new Integer(6));
queue.remove();
System.out.println(queue);
```

Elements are added at the end of the queue

`remove()` may have no argument – head is removed

Output: `[1, 1, 6]`

FIFO order

15

Map Collection Views

Three views of a `Map<K,V>` as a collection

`keySet` — Set<K>

`values` — Collection<V>

`entrySet` — Set<Map.Entry<K,V>>

The `Set` of key-value pairs (implement `Map.Entry`)

18

SortedMap Example

```
SortedMap <String,String>map = new TreeMap<String,String> ();
map.put("Dan", "03-9516743");
map.put("Rita", "09-5076452");
map.put("Leo", "08-5530098");
map.put("Rita", "06-8201124");
System.out.println(map);
```

lexicographic order

Output:

{Dan=03-9516743, Leo=08-5530098, Rita=06-8201124}

Keys (names)	Values (phone numbers)
Dan	03-9516743
Rita	06-8201124
Leo	08-5530098

17

Iterating Over the Keys of a Map

```
Map<String,String> map = new  HashMap<String,String> ();
map.put("Dan", "03-9516743");
map.put("Rita", "09-5076452");
map.put("Leo", "08-5530098");
map.put("Rita", "06-8201124");

for (String key : map.keySet()) {
    System.out.println(key);
}
```

Output:
Leo
Dan
Rita

Iterating Over the Keys of a Map

```
Map<String,String> map = new  HashMap<String,String> ();
map.put("Dan", "03-9516743");
map.put("Rita", "09-5076452");
map.put("Leo", "08-5530098");
map.put("Rita", "06-8201124");

for (Iterator<String> iter= map.keySet().iterator(); iter.hasNext(); ) {
    System.out.println(iter.next());
}
```

Output:
Leo
Dan
Rita

Iterating Over the Key-Value Pairs of a Map

```
Map<String,String> map = new HashMap<String,String> ();
map.put("Dan", "03-9516743");
map.put("Rita", "09-5076452");
map.put("Leo", "08-5530098");
map.put("Rita", "06-8201124");

for (Map.Entry<String,String> entry: map.entrySet()) {
    System.out.println(entry.getKey() + ": " + entry.getValue());
}
```

Output:
Leo: 08-5530098
Dan: 03-9516743
Rita: 06-8201124

Iterating Over the Key-Value Pairs of a Map

```
Map<String,String> map = new HashMap<String,String>();
map.put("Dan", "03-9516743");
map.put("Rita", "09-5076452");
map.put("Leo", "08-5530098");
map.put("Rita", "06-8201124");

for (Iterator<Map.Entry<String,String>> iter= map.entrySet().iterator();
    iter.hasNext(); ) {
    Map.Entry<String,String> entry = iter.next();
    System.out.println(entry.getKey() + ": " + entry.getValue());
}
```

Output:
Leo: 08-5530098
Dan: 03-9516743
Rita: 06-8201124

Sorting

```
import java.util.*;

public class Sort {
   public static void main(String args[]) {
        List<String> list = Arrays.asList(args);
        Collections.sort(list);
        System.out.println(list);
   }
}
```

import the package of List, Collections and Arrays

returns a List-view of its array argument.

Arguments: A C D B
Output: [A, B, C, D]

lexicographic order

Collection Algorithms

- Defined in the Collections class
- Main algorithms:
  - sort
  - binarySearch
  - reverse
  - shuffle
  - min
  - max

Sorting (cont.)

- Sort a `List l` by `Collections.sort(l);`
- If the list consists of `String` objects it will be sorted in lexicographic order. Why?
- String implements Comparable<String>:

```
public interface Comparable<T> {
    public int compareTo(T o);
}
```

- Error when sorting a list whose elements
  - do not implement `Comparable` or
  - are not *mutually comparable*.
- User defined comparator
  - `Collections.sort(List, Comparator);`

25

Best Practice <with generics>

- Specify an element type only when a collection is instantiated:
  - `Set<String> s = new HashSet<String>();`

Interface — Implementation

Works, but...

- `public void foo(HashSet<String> s){…}`
- `public void foo(Set<String> s) {…}`
- `s.add()` invokes `HashSet.add()`

Better!

polymorphism

26
