

פיתוח מערכות תוכנה

סיכום

אוהד ברזילי

מה בתוכנית

- כל צוות יסכם את העבודה שלו לאורך הסמסטר ויציג את המוצר הסופי
- מבנה המבחן
- מחקר שנערך על הקורס, עיצובו, מטרותיו והשגתו
- דיון

המבחן

- שעתיים וחצי
- מורכב מ-5 חלקים, 14 שאלות
- משקף את החומר שנלמד בקורס
- כולל שאלות בקיאות וכן שאלות של השלכה ויישום

- דומה מאוד למבחנים קודמים
 - מופיעים באתר הקורס

- המבחן ללא חומר עזר

Evaluation of a Software Engineering Course by Reflection*

Ohad Barzilay

Orit Hazzan

Amiram Yehudai

**In ITiCSE 2009: Proceedings of the 14th annual ACM SIGCSE conference on Innovation and technology in computer science education, [pp 273-277](#), 2009*

Agenda

- Background:
 - Designing an advanced SE course
 - Multidimensional syllabus
- Using reflection
- Reflection as an evaluation tool

Designing an advanced SE course

- What is an **advanced** SE course?
- Many **advanced** SE courses focus on a **specific** aspect of SE:
 - Analysis/design/process management/domain specific Etc.
- We focus on **putting it all together**

In SE Courses...

Process management

Analysis and design

Technology and tools

Software as a product

Programming languages

Project management

Human aspects

We seek for Holistic Approach

Designing a Multidimensional Syllabus

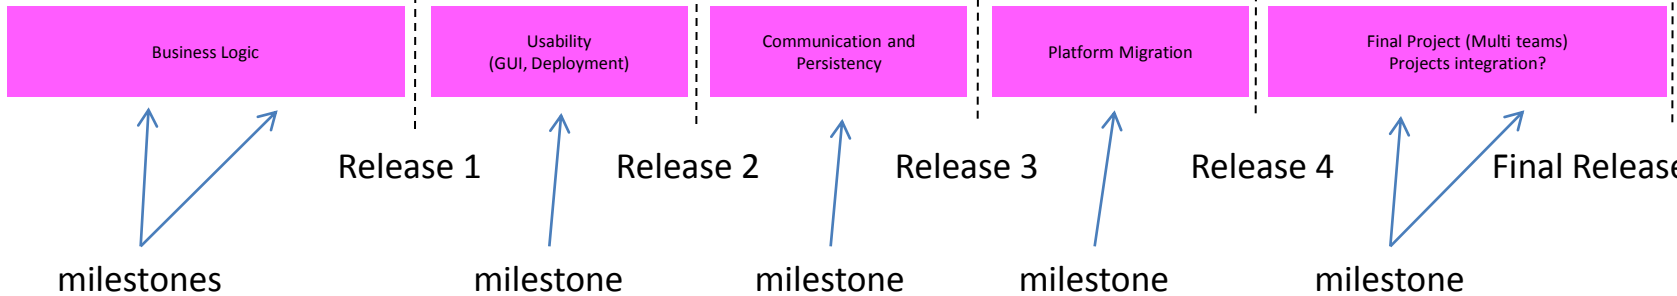

- 4 educational axes:
 - **Foundations of SE**
 - **Practices and tools**
 - **“Productization”**
 - **Technology evolution**
- Working in large teams (6-8 students) along the semester, using Agile methodology
- Lots of self learning
- Frequent deliveries, status reports, iteration planning, constant “client” feedback
- ***A Multidimensional Software Engineering Course***
Barzilay, Hazzan, Yehudai. *IEEE Journal of Transactions on Education*, 2009

Course Outline

Week	1	2	3	4	5	6	7	8	9	10	11	12
Foundations of SE	Introduction	Classic Texts			Standards	Programmers in the Movies		Principles			Domain intersections	Industry Guest Talk
Practices and Tools	XP1: TDD, Refactoring	XP2: CVS, Planning game	XP3: The Team						Training			Frameworks, tools and languages
Productization			Distribution and Deployment	MVC		Crosscutting Concerns	Configuration		Platform	Reverse Engineering	Ease of Use	
Technology Evolution			Enabling Technologies: Eclipse	Concurrency	Networking and Communication	Persistency	Enabling Technologies: XML	Web Programming		Enabling Technologies: Spring		

Project:

• [שיעור ראשון](#) - מבוא ל- eXtreme Programming ותכנות מונחה בדיקות

• [שיעור שני](#) - SVN, תכנון פרוייקט

• [שיעור שלישי](#) - הבטי תקשורת, מדדים, רפלקציה, מבנה צוות XP

• [שיעור רביעי](#) - מבוא לארכיטקטורת תוכנה: חתכי רוחב והוספת כח אדם לפרוייקט מאחר

• [שיעור חמישי](#) - הזרקת תלויות ושיבוץ דוגמאות

• [שיעור שישי](#) - מסדי נתונים, מתכנתים בהוליווד

• [שיעור שביעי](#) - תקנים: שימושי XML, תקנים לפיתוח תוכנה

• [שיעור שמיני](#) - יישומי אינטרנט (חלק א')

• [שיעור תשיעי](#) - יישומי אינטרנט (חלק ב')

• [שיעור עשירי](#) - מקביליות, תצורה

• [שיעור אחד עשר](#) - פלטפורמות התקנה והפצת תוכנה

• [שיעור שניים עשר](#) - סלולר, הרצאת אורח: גיל מגדיש

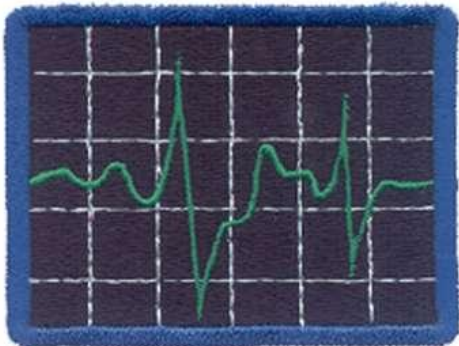

• [שיעור שלושה עשר](#) - גלגולם של רעיונות טובים, הרצאת אורח: יורם יעקובי

• [שיעור ארבעה עשר](#) - הצגת פרוייקטים וסיכום

Challenges

- What about *less is more*?
- Balancing technical and methodological content
- How to monitor goal accomplishment?

Learning outcomes

- **E**xpose students to the **multidimensional nature of SE**
- **E**stablish effective and **manageable team work**
- **E**nhance students' understanding of the **rationale** of building **software tools** and using certain technologies
- **E**ducate students for **effective learning** and for **self-learning**
- **E**nable students to gain additional programming experience while **addressing the different axes**

- Applying the **reflective practitioner** perspective
 - Rethink and examine professional creations during and after the accomplishment of the creation process [Schön, 1983,1987]
 - SEE Adaptation [Hazzan, 2002]
- Students
 - Exploiting course iterative structure
 - Elicit awareness for SE dimensions
- Educators
 - Feedback and monitoring

Reflection Questionnaires

Week #	Question
3	What is your primary insight after the first 2 weeks of the course?
5	Was your work in the current iteration influenced by insights you had during the course? Please explain how and why.
7	<ul style="list-style-type: none">○ Did you change your perception about SE following the first half of the course? To what extent? How?○ Did the first half of the course contribute to establishing already-existing perceptions you had regarding SE? To what extent? How?○ Did the first half of the course affect your perception about things that are not necessarily related to SE? To what extent? How?
9	<ul style="list-style-type: none">○ What are the three main characteristics of your software development project so far?○ Describe problems that appeared in the project so far and suggest ways to overcome them in the next iteration.
11	Describe in a few sentences the 3 most important things you learned during the course.

Reflection vs. Feedback

- **Feedback**
 - The student is asked to evaluate and criticize
 - Addresses the course, the teacher, the material and their quality
- **Reflection**
 - The student is asked to look into herself
 - Focuses on the students' perspective: what she has learned, her insights and perception regarding her own personal experience, and more.
- Using reflection for monitoring and feedback
 - Reveals exposure, awareness, influential aspects

Data Analysis (cont)

- Here, we focus on the 5th reflection assignment:

*Describe in a few sentences the **3 most important things** you learned during the course*

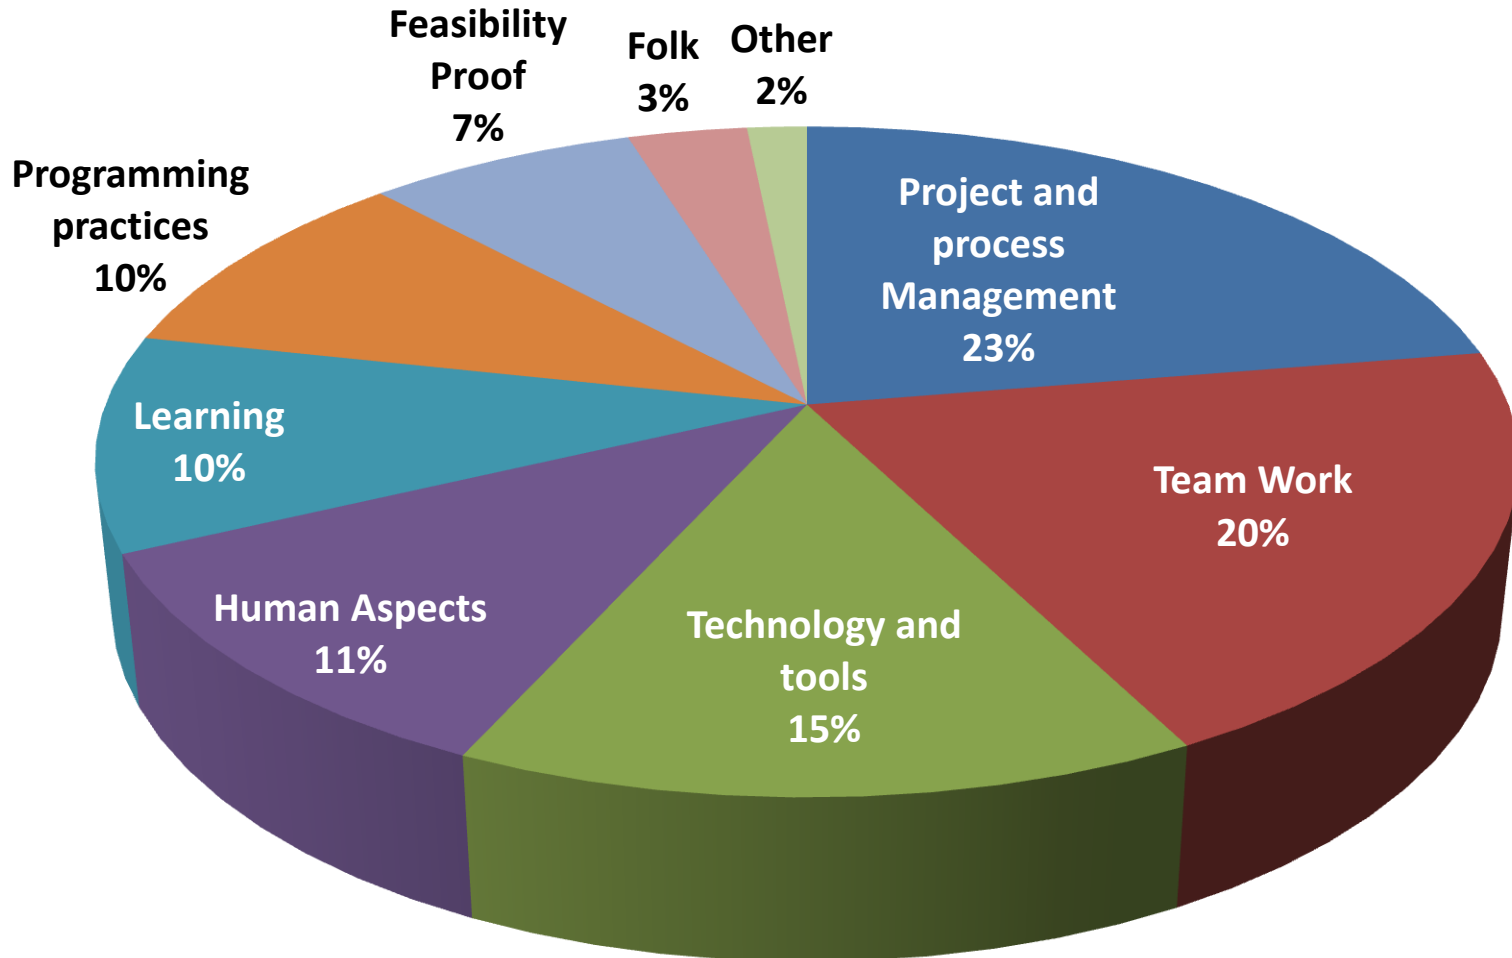

- Data was analyzed:
 - Bottom-up: investigate actual awareness (field grounded)
 - Top-down: investigate how is the course agenda reflected in students assertions

Data Analysis

- 5-step iterative process:
 1. Questionnaires were **read** and input into a large matrix (5x34)
 2. All questionnaires were **conceptualized** (summarized in one sentence)
 3. Each of the sentences was **tagged** using 1-3 words.
 4. Tags **were reviewed for similarities**
 - Merging , introducing new tags, verifying
 5. Repeat (4) at a higher level of **abstraction** to form **trees of tags**

Top-level categories in students' reflections

Multidimensionality

- "There are many approaches to programming, not necessarily [all] with a technological aspect, as I had thought till today..."

#students addressed #SE domains

Learning

- 32% of the students
- We **found evidence** for versatile learning processes:
 - learning by doing, trial and error, learning in class, learning from experience, learning by reflecting, online tutorials, and learning in- and among teams
- "[I learned] that a difficult task can be accomplished in a short time and new technologies can be **learned in a relatively very short period of time** without taking an entire course."
- "In the course, we had to implement various methods and technologies with which we weren't familiar beforehand, and had to become familiar with them, **on a satisfactory level, within two weeks [in order] to provide working versions.**"

Rationale of building software tools and using certain technologies

"I was very surprised to find that working
with J [redacted] hsk I
was [redacted]

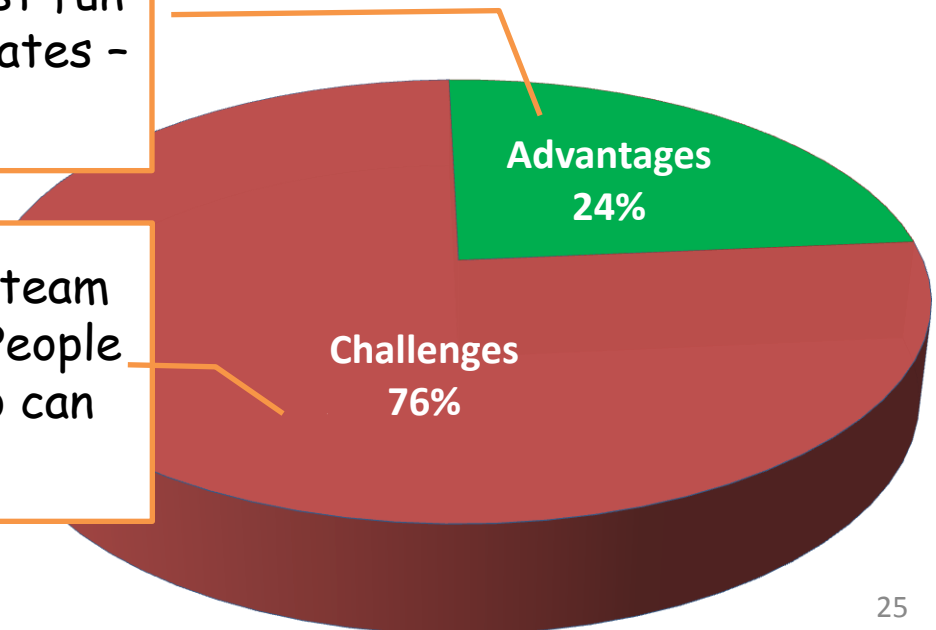

CVS is the most **effective** tool learned in
the course. I can't imagine how was it to
work without it. We also started using it
[in another course] to manage 3 people
in 1 week projects.

Reflections on teamwork

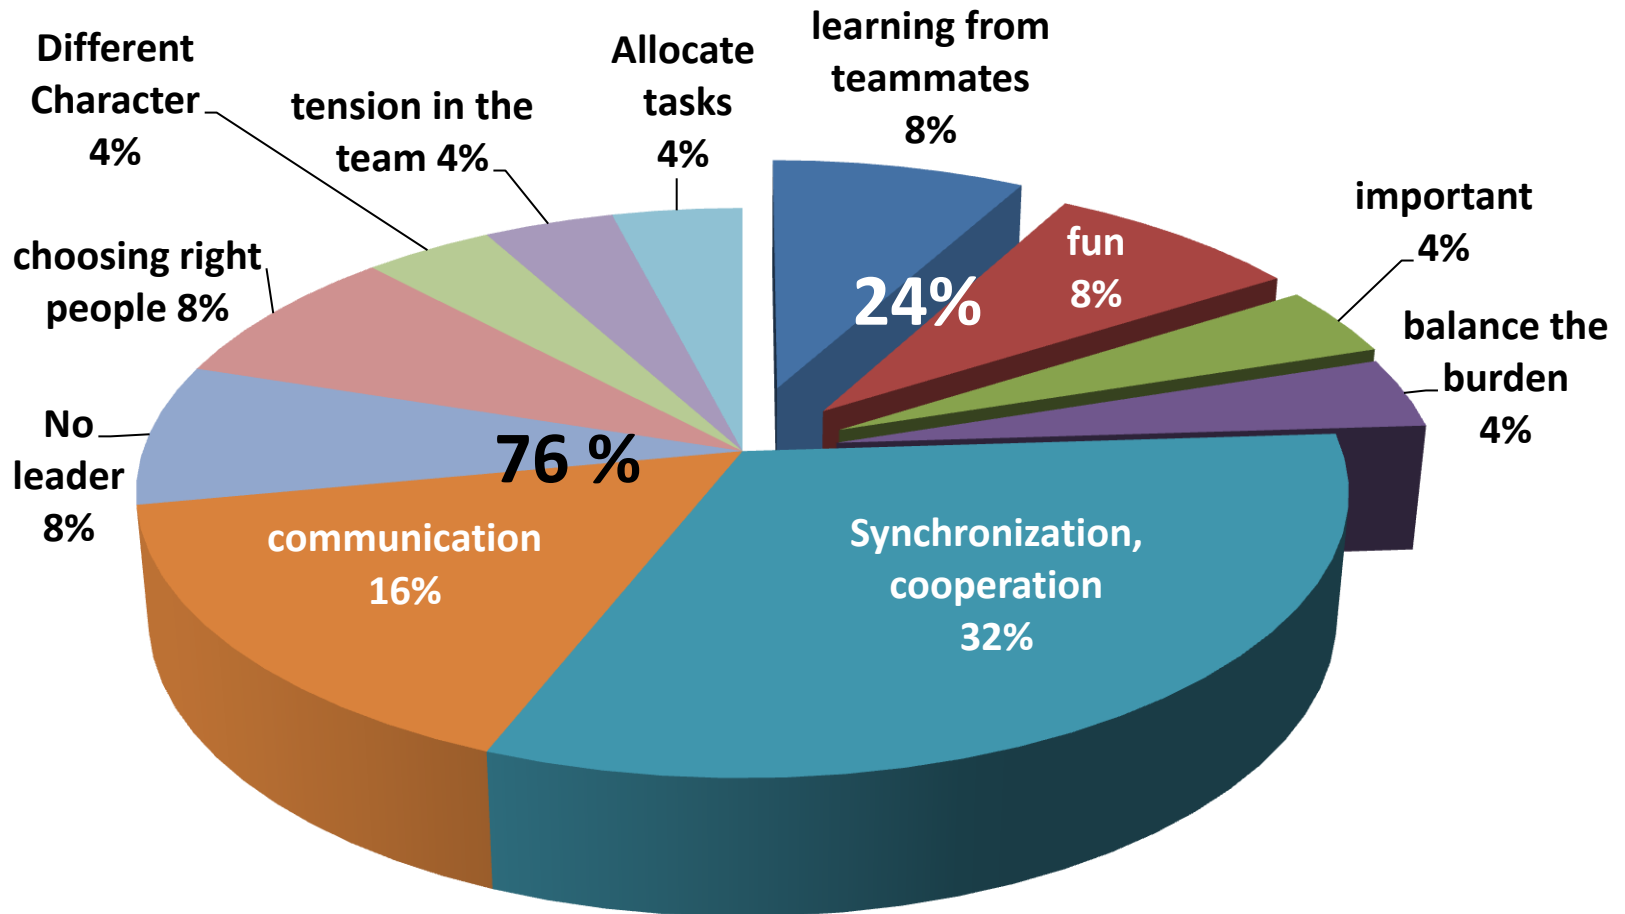

- 68% students mentioned teamwork as one of the 3 most dominant aspects of the course

"Working in teams is fun. I usually prefer to work alone, but I had the greatest fun when I sat together with my teammates - the more the merrier."

"[I] learned how to work without a team leader. Not a pleasant experience. People need guidance [from] someone who can see the larger picture."

Breakdown of Reflections on teamwork

Educational axes in students reflections

Future Work

- Analyze students' reflections from a **timeline perspective**
 - Examining whether or not the reflections represent **change** in students' conception throughout the course
- Investigate students' reflections on a **team level**
 - Addressing similarities as well as differences between teammates and between teams.

Summary

- Use Multidimensional syllabus – it works!
- Encourage students to reflect
 - They would benefit from it
 - You could also use it as an evaluation tool

Thank You

Discussion and questions
