

מפתח בדיקת תרגיל 1 שאלה 1

מס' הערה	ניקוד	פירוט
1	-3	Function does not return a value when it should. For example: <pre>int main() { // no return in main } </pre> The result: a random value is returned !!!
2	0	Unnecessary \ Use / - _ instead of \ \ \ - \ _
3	0	Unnecessary space in printf("\\ n"). Can also be printf("\\n") if you prefer
4	-4	printf("\\n") will print two characters to the screen \n (without a newline!). Should be printf("\\n")
5	0	The boat is printed in one printf line and so is hard to understand. For example: <pre>printf(" \\n \\n ..."); </pre> Should better be in different lines: <pre>printf(" \\n"); printf(" \\n"); ... </pre> Or if you want to spare one printf command, you can use two "... "...: <pre>printf(" \\n" " \\n" ...); </pre> and the compiler will concatenate "a" "b" into "ab"
6	-3	The function returns a value when it is declared void. For example <pre>void main { return 0; } </pre> There should be no return, or the main should be declared to return int.
7	-5	Indentation problems.
8	-100	Does not compile
9	0	printf("x");printf("\\n"); recommended: printf("x\\n");
10	-3	Missing "\\n"
11	-7	Missing \ <pre>printf("x""\\n");instead of printf("x\\n"); </pre>
12	-3	
13	-3	Should be "printf("_\\n");" and not "printf("_/n)", so the "n" will not be printed out;"
14	-3	The "_ " should be in "printf("\\ ^n");"
15	-2	The face is not coordinated
16	-3	Unnecessary "/"
17	-10	The backslash is never escaped in printf. For example: printf("\\- _ \\n") should be corrected into printf("\\- _ \\n")
